A: I don't know what kind of problem you're having, but the code that you've posted does work. Try using a different code and see if it works? I think that the reason why it doesn't work for you is that when you install your software and see that it doesn't, it's because the software doesn't work as intended. If the software is not working properly, it will not work the same way every time. If you do try the code that you're using now, you might be surprised how it works.

The reason that you're not able to activate your code is because it's been activated before. I would recommend that you try another activation code because it might be your activation code. You will need to un-activate your code first. If your software still doesn't work after un-activating, you will have to contact GlobalTIS to have your software fixed and then re-activate the software. The best way to contact them is to use their contact page on the website: The reason that you're seeing "v36" is because the version of your software is 36. You can find the version number that you're using by looking in the upper right hand corner of your software. If the number is in the shape of a hex code, the version number is the number in between the hex code. It's always three digits separated by dots. Opel GlobalTIS V40 Workshop 2018 You might be able to use the file that you downloaded from your email as an activation code. But keep in mind that if you do this, GlobalTIS will still need to manually activate it. If you want to keep using your activation code, you will have to contact them directly and ask them to activate it. If you still have any other questions,

feel free to ask. I don't know why you would think that it doesn't work for you and not for anyone else. 1. Field of the Invention The present invention relates to the field of oil, gas and water well drilling, and in particular to a method and device for separating natural gas from a water and/or oil mixture which comprises a water-oil mixture. 2. Description of the Prior Art Hydraulic fracturing involves a process in which fluid, usually a mixture of water, sand, and chemicals, is pumped into
