References Category:Open-source Ecommerce solutions Category:Responsive web design Category:OpenCartQ: SQL - Show one to many

relationship with counts and distincts I have a table of users: userid name ----------- --- -- 1 John 2 Mary 3 Alice I need to show all the users, but I also need to show a count of their friends as well as a count of their friends' friends, etc. If I wanted to know the names of the top 10 friends of John: SELECT name FROM UserProfile WHERE UserID IN(SELECT UserID FROM UserProfile WHERE

UserID=1); This would work fine. However, I also need to know how many friends each user has. I need to be able to do this for any one user. So for John, the query would look like this: SELECT name, count(UserID) AS friendsCount FROM UserProfile WHERE UserID IN(SELECT UserID FROM UserProfile WHERE UserID=1) So for John, the result would look like this: name friendsCount

----------------------------- John 2 This query would work fine, but if I need to show the count of all users and the count of all friends of each user, it gets tricky: SELECT name, 2d92ce491b
