Gps Pathfinder Office V5.3 Nov 4, 2019 TerraSync v5.0.79.290.107.Unlocked.cracked.exe. Trimble Navigation Limited - Trimble Navigation Limited. is the world's leader in GNSS and positioning.Q: Can't seem to make a shell script work with \$ in name I'm trying to create a bash script that I can edit through a web page. The problem is that when the page sends back something that contains a \$, it doesn't know it. So when I want to use the \$, it doesn't think it's a variable, but rather treats it as a command. How can I fix this? Example of code I'd like to run: #!/bin/bash echo "Sample script" while read input do echo \$input done Response from server: #!/bin/bash echo "Sample script" while read input do echo \$input done This script doesn't work. I have tried replacing the \$ with \\$ and a variety of other solutions, but none of them work. A: You can use single-quotes: echo "Sample script" while read input do echo "\$input" done That's not just a bash quirk, though; just about all of the Bourne Shell (sh) family can do the same thing 4bc0debe42
