## TopOCR (2022)

It is a macro recorder for Windows. It captures your keyboard keys and pastes them at a specified time. With a few clicks, you can have a program recording macros for later use and playback. For the most part, macros are active by default when the program is opened, but you can enable them on a per-user basis. You can also specify when the recording should start and stop.

Just like any other macro recorder, you can use KEYMACRO to record a sequence of actions that can be played back by the program and/or another application. Each individual keystroke has a specific ID, so you can create a shortcut that activates a macro by typing its ID. This macro recorder offers a user-friendly GUI, so anyone can use it, even if they are not familiar with coding. You can set up a new macro with only a few clicks. At the end of the recording, you can choose a template in which to paste the macro. This type of template is specific to the program and the recording duration, but you can also modify the script on the fly. You can also set up macros that are executed one by one, or they can be sequenced. This means that you can record, for

example, three macros, such as opening a file, saving it and closing it. Then you can repeat the sequence, so your workflow becomes efficient.
